

Mitsubishi ELSGW Integration

GuardPoint 10 Module

Guardpoint 10 has the ability to integrate with the very latest Mitsubishi Electric DOAS Lift system, ELSGW (Elevator Secure Gateway).

The lift system

Mitsubishi Electric's DOAS system optimizes multi-car lift systems by allocating cars efficiently according to the floors that passengers input while waiting in the hall, helping to reduce both wait and travel times. The integration means that you can restrict access to the cardholder via time schedules and floors or destinations increasing security and efficiency of movement around the building.

How it works

When combining DOAS with GuardPoint10 the cardholder operation can work in the following ways: The passenger waves an ID card over the card reader in the hall and then enters an authorized floor number. The user's floor is preregistered in the ID card, so after the card is waved over the reader, the panel directs the user to the elevator going to that floor. There is no need to enter the floor number manually.
