Vantage Point Software

Sensor Access's ongoing commitment to access control innovations continues with the release of Vantage Point.

The Vantage Point Software has been built utilising the latest software development tools and designed with simple and intuitive user experience in mind. Utilising Microsoft .NET 4 Framework and using SQL 2012 it provides a high performance, stable and scalable system that you can rely on.

Easy to network

All the controllers connect via TCP/IP (no RS485). The software auto detects the controllers for quick setup. Cardholders can be imported as a batch for a quick retro-fit.

Comprehensive reporting

Full event reporting and user audit trail is critical for any serious access control system. Vantage Point features a modern report system which can be designed with great flexibility and also exported into multiple formats with ease. The database is SQL ensuring all transactions are safe and secure.

Scalability

Vantage Point is completely scalable and fits any size system. Workstations can be added to provide multiple points of event monitoring and management.

Event and Alarm Monitoring

Vantage Point allows you to filter and prioritise alarm and event transactions in real time. Alarm popups bring serious alarms immediately to the operators attention requiring acknowledgement.

Graphical Map

The graphical map shows real time status of your doors and alarm input status's immediately bringing ones attention to the location of the alarm. Maps can be imported and icons placed.

Multiple cards and formats

Vantage Point allows 3 access credentials per cardholder record. Each credential can either be card or pin or both providing you the greatest flexibility in managing different access credentials per cardholder.

VP-EXP / VP-ENT

Vantage Point Software

Key features:

- Intuitive User-Friendly Interface
- Controller Auto Detection
- Large System Capabilities
- User Friendly Software
- Multiple Workstations
- Extensive Reporting
- SQL Database
- High Level 3DES Encryption
- Time and Attendance
- Alarm Monitoring
- Multiple Access Cards Per Person
- Graphical Maps with Icons
- CCTV Integration Management Platform
- Global Anti-Passback
- Full Report Generation

The Vantage Point software comes in two versions: VP Express and VP Enterprise

The **Vantage Point Express edition** is an excellent choice for systems to up to 32 readers. Vantage Point Express is easy to configure with an auto detect capability's for a rapid install and user friendly system.

Vantage Point Enterprise brings the latest technology in software and hardware into a truly powerful converged platform. Vantage Point supports Microsoft SQL Server and is designed in server/client architecture in order for multiple users to access and manage the system at the same time. Fully integrated fingerprint and iris template management as well as high level 3DES data encryption means vantage point can be used for high security sites with no compromise.

Vantage Point Software

Specification

System requirements

CPU	Intel core i3 or higher
Memory	2GB RAM or Higher
Hard Disk Space	200GB
Network	10/100MB
Operating Systems	Microsoft: Windows XP, Vista, Windows 7 (32/64bit), Server 2008 (32/64bit)
Database	SQL Server 2008 (32/64bit)

Part Numbers

VP-EXP	Vantage Point Express access control software Up to 32 readers / unlimited cardholders Alarm Management, Graphical maps Biometric Integration, T/A reporting Running on MS SQL Supplied on a USB Memory stick
VP-ENT	Vantage Point Enterprise access control software Unlimited readers / unlimited cardholders Alarm Management, Graphical maps Biometric Integration, T/A reporting Running on MS SQL Supplied on a USB Memory stick
VP-ENT-WS	Vantage Point Enterprise Access Control software workstation license.
