

## **Sensor Visitor Management** QR visitor management for GuardPoint 10.

Create a touch-free experience for visitors and non-permanent employees using the Sensor Cloud VMS service. The Sensor VMS provides a portal to create visitors and issue QR code passes via a simple online interface.

## How it works?

- Send pre-visit QR badges straight to your visitors via email.
- Create new visitors specifying the time and date of visit and required access rights, then issue them a QR code pass.
- The visitor then presents the QR pass via their phone to allow them into the secure location such as a pre-booked meeting room, entertainment venue or accommodation.
- CloudPoint is hosted on the cloud allowing you to manage visitors from anywhere at anytime via a web browser.

- There is no need to worry about future upgrades as it will always stay up to date with new future upgrades due to being on the cloud.
- Sensor VMS Connects to you GuardPoint10 system via a secure connection using GuardPoint10 HTTP-API.
