

Lift Control

GuardPoint Pro Software

For monitoring employees movements within multi storey buildings. The lift control module allows control of a users movements within the lifts. Each floor selection button within the lift is wired to a relay on the controller. When a user presents their card to the reader, the controller will make the decision of which floors they have access to.

Key Features

- Limit entrance to only authorised floors
- Control up to 64 floors per controller
- Ideal for multi tenanted buildings

With the ability to control up to 64 floors per controller this feature is suitable for the most challenging of environments.
